

DISCLAIMER:

The Government provides the accompanied course profile data subject to all of the below conditions:

- The data provided herein is provided as information only. The Government will not provide and/or merge this data into any contractual agreements. The data provided could enable Industry to better understand the JLTV's intended operational environment, should be considered together with the JLTV's OMS/MP and Purchase Description, but the final authority for JLTV's performance requirements will be the final approved JLTV Purchase Description.
- All recipients of this information are hereby advised that a manufacturer could design and build a non-compliant vehicle based on exact course conditions (course data provided for a particular timeframe) as any change to course severity/condition will invalidate the data provided. The data provided represents a snapshot in time of course severity/condition measured in February/March 2011 and therefore should not be used as an exact representation of each of the Government test courses. Course conditions change due to use, environmental conditions, maintenance, and other factors. The measured terrain profile should be expected to be different with subsequent measurements (even immediately after the initial measurement) and continues to change with time. The Government's test sites evaluate vehicle test course surface roughness in accordance with (IAW) Test Operating Procedure (TOP) 1-1-010, Course Procedures.
